The scatter plot displays data points as black dots. The x-axis, labeled 'RDateTime', has major ticks at 15:28, 15:30, 15:32, and 15:34. The y-axis has major ticks at 0, 20, 40, 60, 80, and 100. A vertical line is positioned at approximately 15:30:15. The data shows a period of low values (around 10-20) until 15:30, followed by a steady increase to about 60 by 15:34. There are several outliers with high values (above 80) at the end of the time series.

The scatter plot displays CO2 concentration in ppm on the y-axis (ranging from 380 to 410) against RDateTime on the x-axis (ranging from 15:27 to 15:35). The data points show a significant increase in CO2 concentration starting around 15:28, peaking near 15:30 at approximately 409 ppm, and then decreasing. Two vertical black lines are drawn at approximately 15:28:30 and 15:34:30. The plot area has a light gray background with white grid lines.
